Introduction to Computational Linguistics

Frank Richter

fr@sfs.uni-tuebingen.de.

Seminar für Sprachwissenschaft Eberhard Karls Universität Tübingen Germany

Two Approaches in CL

- Rule-Based Systems
 - Explicit encoding of linguistic knowledge
 - Usually consisting of a set of hand-crafted, grammatical rules
 - Easy to test and debug
 - Require considerable human effort
 - Often based on limited inspection of the data with an emphasis on prototypical examples
 - Often fail to reach sufficient domain coverage
 - Often lack sufficient robustness when input data are noisy

Two Approaches in CL

- Data-Driven Systems
 - Implicit encoding of linguistic knowledge
 - Often using statistical methods or machine learning methods
 - Require less human effort
 - Are data-driven and require large-scale data sources
 - Achieve coverage directly proportional to the richness of the data source
 - Are more adaptive to noisy data

Central Goal of the Field

build psychologically adequate models of human language processing capabilities on the basis of knowledge about the way in which humans acquire, store, and process language.

build functionally correct models of human language processing capabilities on the basis of knowledge about the world and about language elicited from people and stored in the system.

Application Areas

- machine translation
- speech recognition
- speech synthesis
- man-machine interfaces

Application Areas

- intelligent word processing: spelling correction, grammar correction
- document management
 - find relevant documents in collections
 - establish authorship of documents
 - catch plagiarism
 - extract information from documents
 - classify documents
 - summarize documents
 - summarize document collections

Machine Translation

What makes Machine Translation an important application area to study:

historically first application area, and for at least a decade the only application area, of computational linguistics

Machine Translation

What makes Machine Translation an important application area to study:

- historically first application area, and for at least a decade the only application area, of computational linguistics
- requires all steps relevant to linguistic analysis of input sentences and linguistic generation of output sentences

Machine Translation

What makes Machine Translation an important application area to study:

- historically first application area, and for at least a decade the only application area, of computational linguistics
- requires all steps relevant to linguistic analysis of input sentences and linguistic generation of output sentences
- hence, machine translation is scientifically one of the most challenging and most comprehensive tasks in computational linguistics

The Purposes of Translation

Information Acquisition:

 e.g. Gather information on scientific articles or newspapers written in a foreign language.

The Purposes of Translation

Information Acquisition:

 e.g. Gather information on scientific articles or newspapers written in a foreign language.

Information Dissemination:

 e.g. Translation of technical manuals, legal texts, weather reports, etc.

The Purposes of Translation

Information Acquisition:

 e.g. Gather information on scientific articles or newspapers written in a foreign language.

Information Dissemination:

 e.g. Translation of technical manuals, legal texts, weather reports, etc.

Literary Translation:

e.g. Translation of novels, poems, etc.

Information Acquisition:

involves translation from a foreign to a native language

- involves translation from a foreign to a native language
- typically used by non-linguists with little or no linguistic competence in the source language

- involves translation from a foreign to a native language
- typically used by non-linguists with little or no linguistic competence in the source language
- pre-processing of the input not feasible due to lack of linguistic competence by the user in the source language

- involves translation from a foreign to a native language
- typically used by non-linguists with little or no linguistic competence in the source language
- pre-processing of the input not feasible due to lack of linguistic competence by the user in the source language
- may require special-purpose lexica

- involves translation from a foreign to a native language
- typically used by non-linguists with little or no linguistic competence in the source language
- pre-processing of the input not feasible due to lack of linguistic competence by the user in the source language
- may require special-purpose lexica
- low-quality translation is tolerable

Information Dissemination:

involves translation from a native to a foreign language

- involves translation from a native to a foreign language
- pre- and post-processing of the input feasible due to linguistic competence by the translator in the source language

- involves translation from a native to a foreign language
- pre- and post-processing of the input feasible due to linguistic competence by the translator in the source language
- may involve sublanguage with restricted vocabulary;
 e.g. translation of weather reports

- involves translation from a native to a foreign language
- pre- and post-processing of the input feasible due to linguistic competence by the translator in the source language
- may involve sublanguage with restricted vocabulary;
 e.g. translation of weather reports
- often involves special terminologies stored in a terminology database; e.g. for translation of technical manuals

- involves translation from a native to a foreign language
- pre- and post-processing of the input feasible due to linguistic competence by the translator in the source language
- may involve sublanguage with restricted vocabulary;
 e.g. translation of weather reports
- often involves special terminologies stored in a terminology database; e.g. for translation of technical manuals
- purely human translation for such tasks can be time-consuming, inconsistent, or tedious.

Literary Translation

 requires stylistic elegance, often involves metaphorical and metonymic language

Literary Translation

- requires stylistic elegance, often involves metaphorical and metonymic language
- abundance of highly-trained human translators

Literary Translation

- requires stylistic elegance, often involves metaphorical and metonymic language
- abundance of highly-trained human translators
- task rarely performed by machine translation
