**Talk: Practical Corpus Search with CSniper and ANNIS3**

**6/01/15**

Niko Schenk

In this talk, I will give a general overview of currently available corpora and other textual resources at the IEAS. In particular, we will inspect the different layers of annotation using two web interfaces for practical corpus search: CSniper and ANNIS3 -- tools which have been installed one year ago and which are ready for in-class use.

The focus of this session is rather hands-on instead of theoretical and should serve as a practical introduction to the query languages: I will show how to search and export results and elaborate on various ways to post-process the output for statistical purposes.

Links to the web interfaces are available at:
